Baureihe 01

steam locomotive with tender

Motorised using LEGO® Powered Up!

Baureihe 01 ⋙→ Albrecht Edition

The **Baureihe 01** class steam locomotive was designed for express passenger service in Germany with the *Deutsche Reichsbahn*, and had a top speed of 130 km/h.

This MOC is loosely modelled after locomotive number 01 008, the first of this class to enter service in 1926. Like the other locomotives of this class used by the *Deutsche Bundesbahn* of West-Germany after the war, it was eventually fitted with the so called *Witte* smoke deflectors (in contrast to its East-German brethren which used the larger *Wagner* smoke deflectors).

Today, 01 008 is part of the collection of the railway museum in Bochum-Dahlhausen.

⋙→

This is not the first MOC for a locomotive from **Baureihe 01**, and it probably won't be the last. Every builder has their own approach and design goals. For this MOC the following goals are met:

- *All parts used are genuine LEGO® parts*
- *The locomotive is motorised using* Powered Up *parts*
- *The locomotive can run on LEGO® tracks, and handle all curves and switches*
- *The scale of the model makes it fit in with LEGO® City sets*
- *The drive wheels are actually drive wheels (i.e., the motor drives them)*
- *The cab can hold a minifigure*

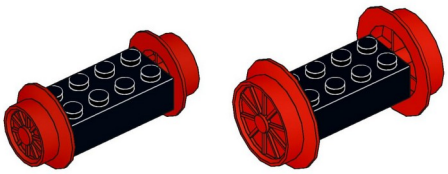

⋙→

This MOC uses a couple of vintage parts, and some other iffy parts. All of the parts used were available on Bricklink in 2024, but some may be a bit bothersome to find:

3959, *Utensil Space Gun / Torch*, was produced from 1979 to 2010, and is used, in red, 16 times to represent the suspension of the tender wheels. While not exactly a rare item, you will probably have to gather all 16 by splitting your order over a couple of sellers.

4180c05, the *modified black 2 × 4 brick with large spoked red wheels*, was used only in set 7750 released in 1980, and two subsequent service packs providing just that part. This part is, while available, relatively pricey — although fortunately, you need **just one** for the trailing wheel under the cab. If you can't find it, it may be substituted by the more common (and cheaper) 4180c04 used for the tender and the leading wheels without looking too weird. Just add a plate to adjust the height.

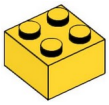

4180c04 4180c05

Black 75c19 *rigid hose* is used 4 times on the sides of the boiler. If you are having trouble finding 75c19, you could use longer versions and cut those down to 19 studs. The '19' in the part number stands for the length in studs, so any higher number would work.

The *tile wedges* 5091 and 5092 were first released in 2024, so you might not have them lying around. For black, availability is good though.

⋙→

A number of parts are not visible when the locomotive is finished. In these instructions these parts are coloured **yellow**. *Feel free to use any colour you like for those!*

While this MOC uses nothing but LEGO® parts, your *drive wheels* (85489b) may lack the elastic bands they need for traction. Tip: consider using transparent 1 mm thick silicone O-rings with an outer dimension of 26 mm. These are available online, cheaply, from a variety of sources.

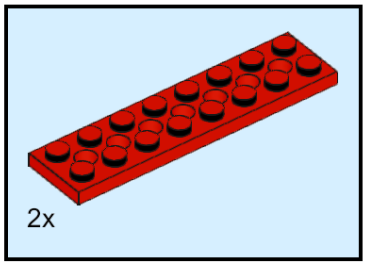

To control the motor, you need the Powered Up controller (28739). It is omitted from the parts list.

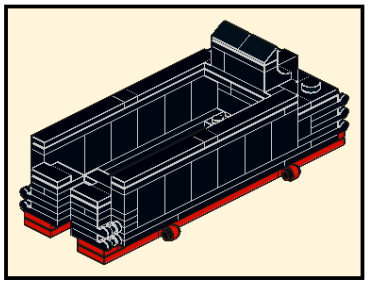

⋙→

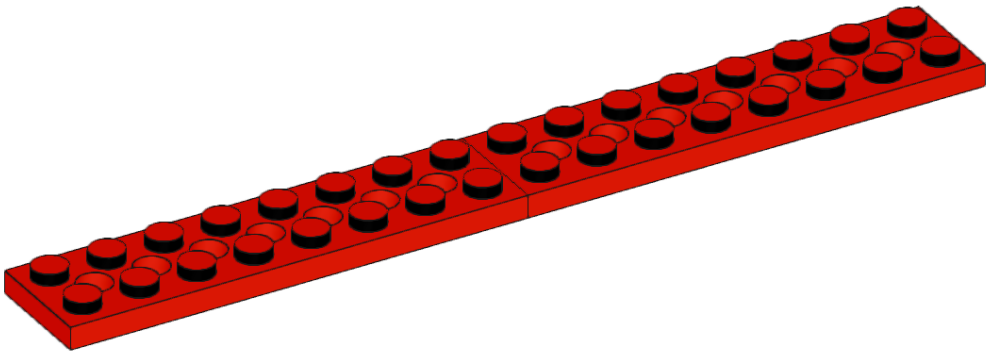

This MOC exists because my five year old son wanted a LEGO® steam locomotive for *Sinterklaas*, but there were no suitable official sets. So as any good parent would do, I designed one myself, made a set of instructions, and got him the parts. Therefore, this is the ***Albrecht Edition***.
